WiFi Technology Generations

	Wi-Fi 4 (IEEE 802.11n)	Wi-Fi 5 (IEEE 802.11ac)	Wi-Fi 6 (IEEE 802.11ax)	Wi-Fi 6E (IEEE 802.11ax)	Wi-Fi 7 (IEEE 802.11be)
Frequency bands operations	2.4GHz (2.402 - 2.494) 5GHz (5.030 - 5.990)	5GHz (5.030 - 5.990)	2.4GHz (2.402 - 2.494) 5GHz (5.030 - 5.990)	2.4GHz (2.402 - 2.494) 5GHz (5.030 - 5.990) 6GHz (5.925 7.125)	2.4GHz (2.402 - 2.494) 5GHz (5.030 - 5.990) 6GHz (5.925 7.125)
Maximum bandwidth per channel	2.4GHz: 40MHz 5GHz: 40MHz	2.4GHz: 40MHz 5GHz: 80MHz	2.4GHz: 40MHz 5GHz: 160MHz	2.4GHz: 40MHz 5GHz: 160MHz 6GHz: 160MHz	2.4GHz: 40MHz 5GHz: 160MHz 6GHz: 320MHz
Maximum number of non-overlapping channels	2.4GHz: 3 Channel:1,6,11	5GHz: Channels:36,52 (80MHz)	2.4GHz: 2 (40MHz) Channel:1,11 5GHz: Channel 36: 5.180 GHz to 5.340 GHz (160 MHz width) or Channel:36,52,100,116,132(80 MHz)	2.4GHz: 2 (40MHz) Channel:1,5,9,13 5GHz: Channel 36: 5.180 GHz to 5.340 GHz (160 MHz width) Channel 36,52,100,116,132 (80MHz) 6GHz: 7 (160MHz)	2.4GHz: Channel 1,5,9,13 (40MHz) 5GHz: 2 (160MHz) or Channel 36,149 (80MHz) 6GHz: Channel 31, 63, 95, 127, 159, 191 (320MHz)
Maximum MIMO configuration	4x4	4x4	8x8	8x8	16x16
Highest modulation	64 QAM	256 QAM	1024 QAM (1K QAM)	1024 QAM (1K QAM)	4096 QAM (4K QAM)
Maximum PHY datarate	600 Mbps	1.73 Gbps	9.6 Gbps	9.6 Gbps	46.1 Gbps
Multi user MIMO (MU-MIMO)	N/A	Downlink (Wave 2 only)	Downlink Uplink	Downlink Uplink	Downlink Uplink
Multi user OFDMA (bandwidth sharing)	N/A	N/A	Yes	Yes	Yes
Target Wake Time (TWT)	N/A	N/A	Yes	Yes	Yes (improved)
Multi Link Operation / Multi Resource Unit	N/A	N/A	N/A	N/A	Yes

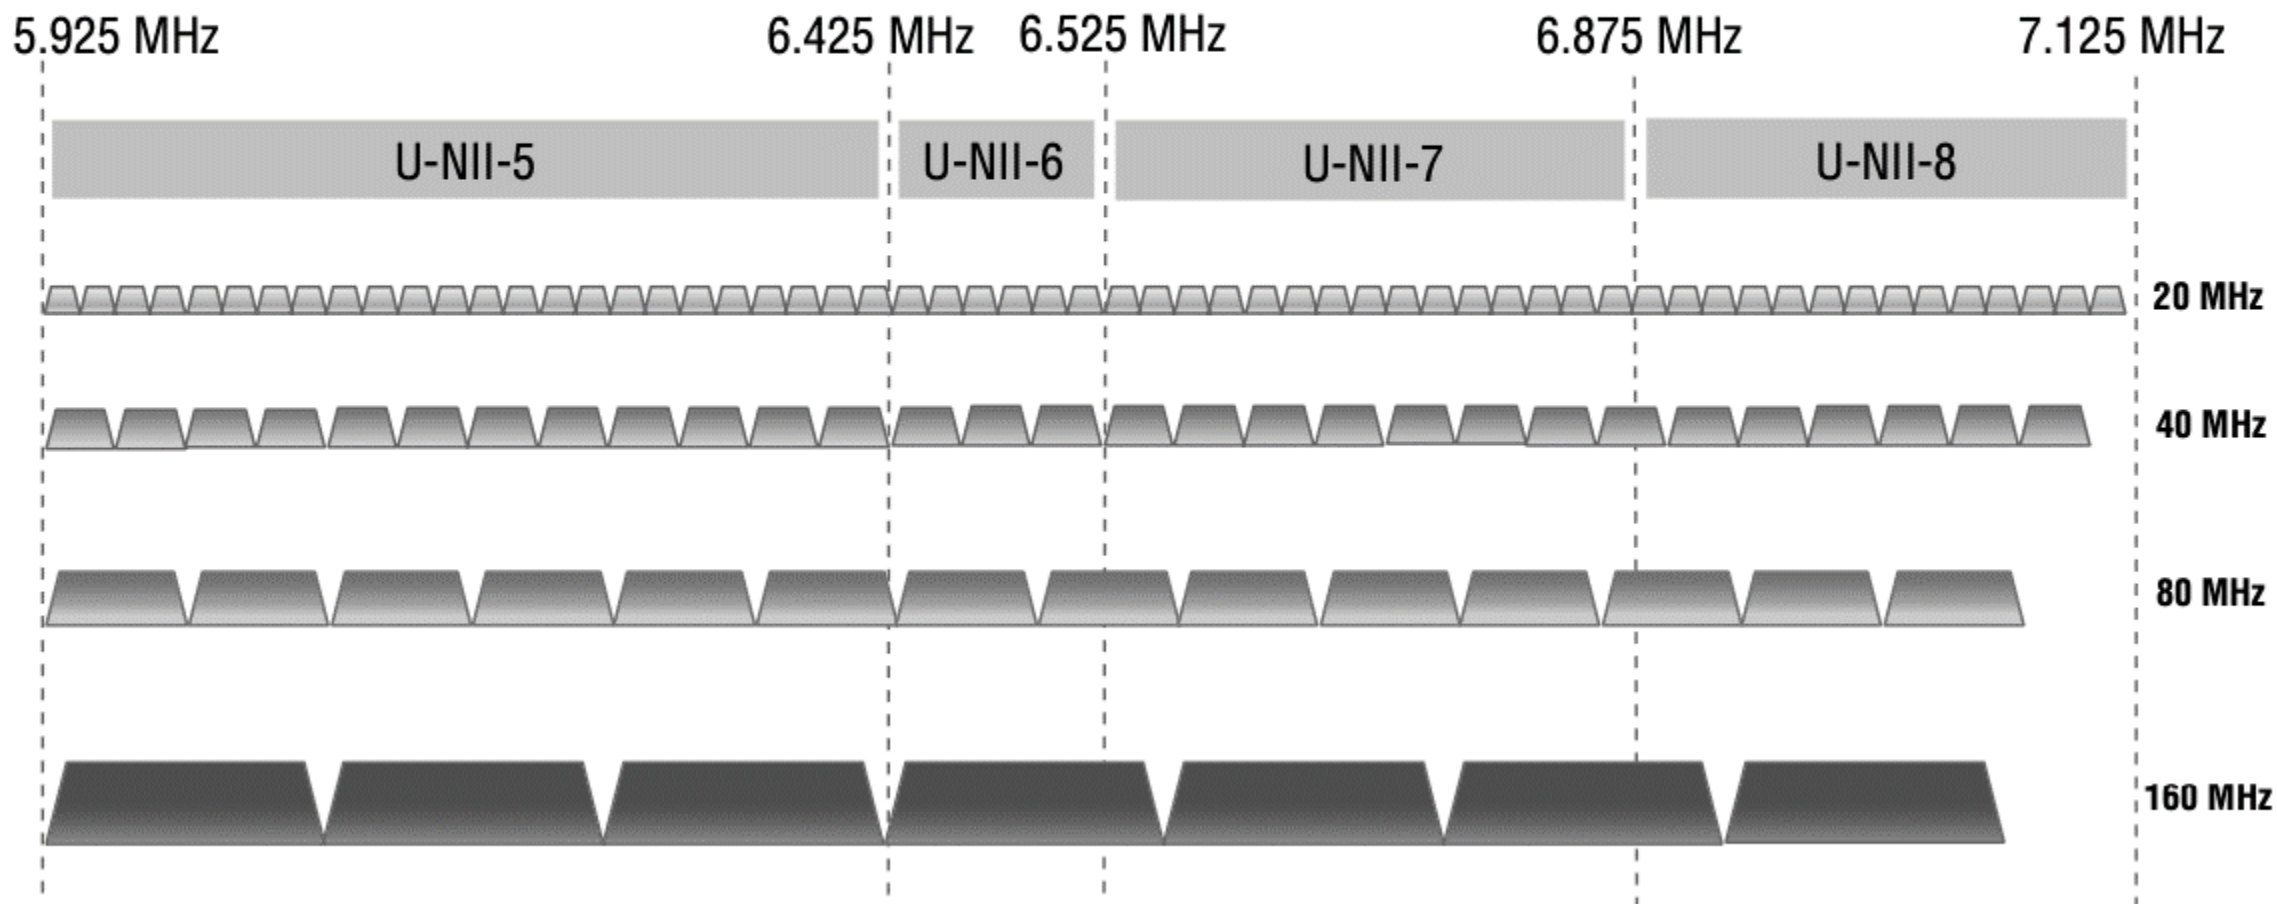

WiFi Unlicensed Spectrum Allocation History

New 6GHz Spectrum for Unlicensed Use

- 
- (59) 20 MHz channels
 - (29) 40 MHz channels
 - (14) 80 MHz channels
 - (7) 160 MHz channels

1,200 MHz of new frequency spectrum

In comparison with 2.4GHz and 5GHz

Band **Channels** **BW**

80 MHz
160 MHz

Up to
1,200 MHz of New Spectrum
56 Channels Available
including up to seven 160 MHz Channels

Spectrum available in the 6 GHz band varies by geography.

6GHz Global Adoption

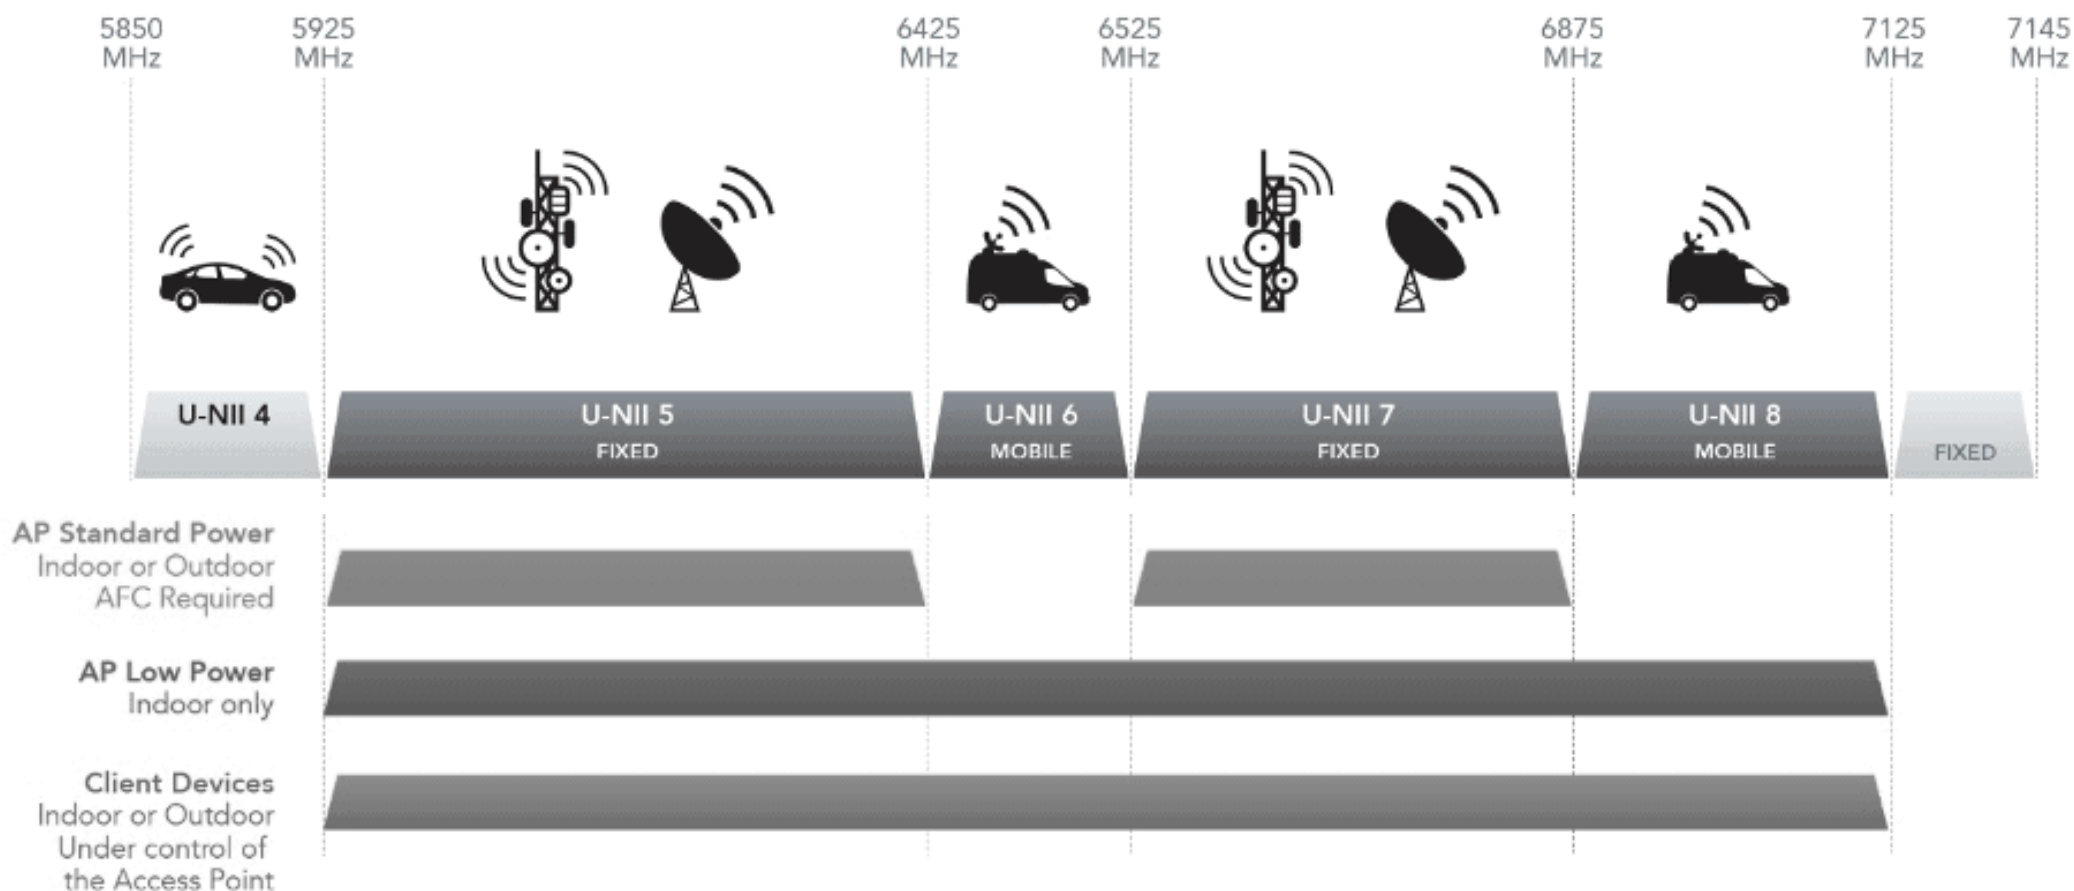

70 Countries
As of 15 July 2023

2B+ Citizens **70%+** of global GDP

Incumbent Users of U-NII 5, U-NII 6, U-NII 7 and U-NII 8 Band

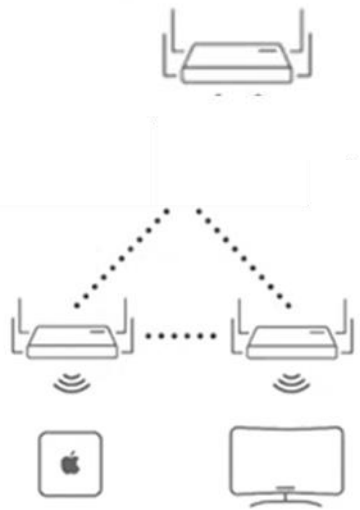

- U-NII5 and U-NII 7 bands - Satellite link communications to geostationary satellites, Point-to-Point microwave links deployed by carriers for wireless backhaul, critical services like utilities, as well as public safety and emergency services.
- U-NII 6 and U-NII 8 bands – Primarily used for mobile services, for example mobile trucks used by the news crews to relay the signal back to the TV studio.

Equipment Classes for 6 GHz Unlicensed Operation

Low Power Indoor (LPI) AP

- Fixed indoor only
- Up to 63X lower energy
- No antenna connectors
- No weatherproofing
- Wired power

Subordinate Indoor Device

- Same rules as LPI AP, **plus:**
- Under AP control
- No direct Internet connection

Standard Power (SP) AP

- Fixed indoor / outdoor
- Controlled by AFC database
- Automated geolocation
- Pointing angle restriction

Mobile Client

- Indoor / outdoor
- 4X less power than connected AP

Fixed Outdoor Device

- Same rules as SP AP, **plus:**
- Attached to structure

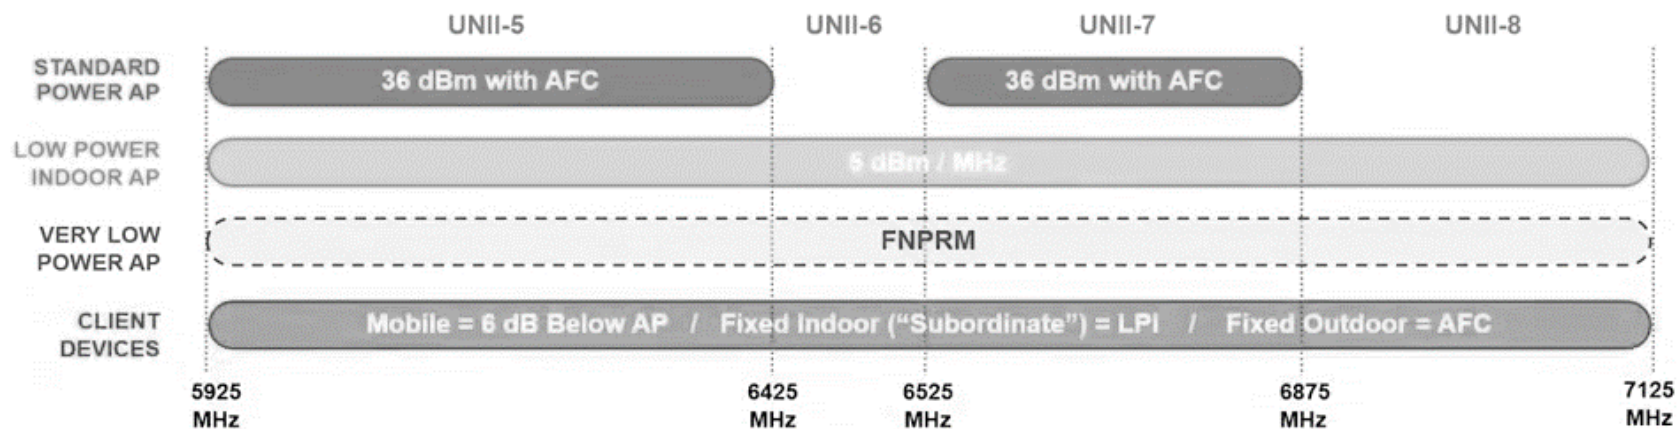

Very Low Power (VLP) AP

- Mobile indoor / outdoor
- 160X lower energy

*~2 Gbps throughput with
sub-ms latency at 3m*

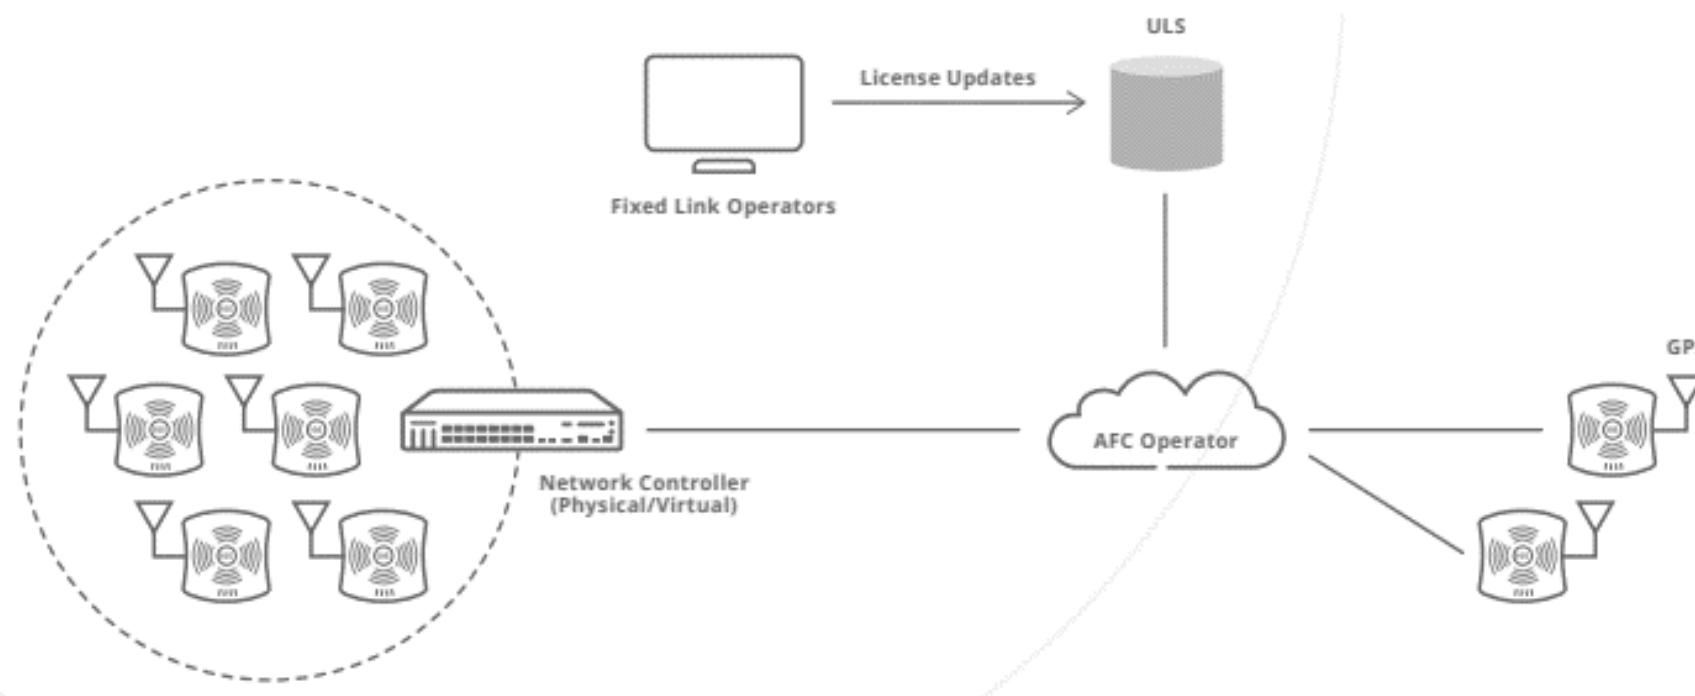

Initial 6GHz rules in the US

- Standard Power APs should be under AFC control and its not allowed in UNII-6 and UNII-8 Bands.
- Low Power Indoor can be used across the entire band without need for AFC but with max power of 5dBm/MHz, 6dB (4x) lower power than Standard power APs.

Device Class	Bands	Limitations	Maximum EIRP	Maximum PSD**
Standard Power AP	UNII-5	<ul style="list-style-type: none"> • AFC Control • Automated geolocation • Antenna mask (if outdoors) • Attached to structure (fixed client) 	36 dBm	23 dBm / MHz
Fixed Client	UNII-7		21 dBm > 30°	
Low Power Indoor AP	UNII-5	<ul style="list-style-type: none"> • Indoor only • Integrated antennas only • No weatherproofing • Mains power • No battery • Labeling requirement 	30 dBm	5 dBm / MHz
	UNII-6			
Subordinate Device	UNII-7			
	UNII-8			
Mobile Client	UNII-5	<ul style="list-style-type: none"> • No mobile hotspot 	30 dBm (SP)	17 dBm / MHz (SP)
	UNII-6		-or-	-or-
	UNII-7			
	UNII-8			24 dBm (LPI)

Automatic Frequency Coordination(AFC)

- Standard Power APs should be under AFC control.
- APs should be capable of determining their geolocation.
- They must request a list of available channel from the AFC operator once every 24 hours.
- APs must share their geolocation,(along with error margin), their serial number and FCC ID.
- The AFC operators will manage a dynamic database on all active RF activity from fixed link operators and will make the channel availability decisions based on this data.

Most Promising WiFi 6E Use Cases

6GHz Mesh Backhaul

Hospital WiFi

Very High Bandwidth Applications

Industrial Robots

The Backward Compatibility Problem – Solved!

NO
Legacy
Devices!

New 6E Features

New Features In 6 GHz

- Native Wi-Fi 6 Transmissions
 - High-Efficiency (HE) PHY/MAC structure
 - Native HE beacons
- 3 methods for In-Band AP Discovery
 - Fast Initial Link Setup (FILS) Discovery announcements
 - Unsolicited Probe Responses
 - Active scans on preferred scanning channels
- Security Enhancements
 - WPA3 Enterprise / Personal required
 - Protected Management Frames (PMF) required
 - Enhanced Open required

Enhancements In 5 GHz & 2.4 GHz

- 2 methods for Out-of-Band AP Discovery
 - Reduced Neighbor Reports (RNR)
 - Multiple-BSSID Beacons
- Security Enhancements
 - Expanded requirements for recent WFA standards

Shortened Beacons

Wi-Fi 6 (802.11ax HE) beacon in 5 GHz showing with information elements (example)

Wi-Fi 6 (802.11ax HE) beacon in 6 GHz showing information elements (example)

- There are no legacy devices in 6GHz mode and hence no need for any backward compatibility.
- Because of this most legacy WiFi4 and WiFi5 HT, VHT information elements are all removed from 6GHz Beacons
- Any important information that is supposed to be forward compatible is added to the HE information elements

Out of Band Discovery - RNR

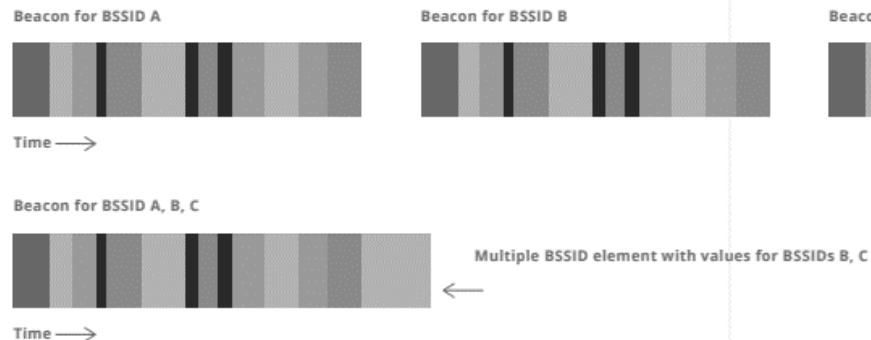

- Most APs will have both 5GHz and 6GHz radios.
- Scanning cannot be avoided on the 5GHz bands, so the idea is to use the 5GHz scan to get the 6GHz information.
- APs can respond to probed on 5GHz channels with all the information about the 6GHz networks so that the clients don't have to scan separately on 6GHz.
- After scanning the clients can create a 6GHz neighbor AP list and roam as needed to GHz AP.

Reduced Neighbor Report IE in Beacons and Probe Responses

```

Multiple BSSIDs in a Single Beacon

- Its very common to have several SSIDs on a single AP in modern enterprise deployments.
- MDUs scenarios may call for separate BSSIDs for each user.
- One Beacon for each SSID/BSSID will take up too much airtime.
- MBSSID feature will allow AP to advertise multiple BSSID/SSIDs in a single Beacon
- Common information will be send once and specific details for each SSID/BSSID will be sent in individual elements in the Beacon.

    > Ext Tag: MU EDCA Parameter Set
    > Ext Tag: HE 6 GHz Band Capabilities
    > Tag: Vendor Specific: Microsoft Corp.: WMM/WME: Parameter Element
  
```

With MBSSID channel utilization is reduced to 1%

In Band Scanning and Preferred Scanning Channels (PSC)

- In-band scanning is only used when we have 6GHz only APs that don't operate on 5GHz channels.
- Example: Mesh Backhaul, Point-to-Point Bridge

		UNII-5																							
		5.955	5.975	5.995	6.015	6.035	6.055	6.075	6.095	6.115	6.135	6.155	6.175	6.195	6.215	6.235	6.255	6.275	6.295	6.315	6.335	6.355	6.375	6.395	6.415
20 MHz		1	5	9	13	17	21	25	29	33	37	41	45	49	53	57	61	65	69	73	77	81	85	89	93
40 MHz		3		11		19		27		35		43		51		59		67		75		83		91	
80 MHz		7				23				39				55				71				87			
160 MHz		15								47								79							

Active Scanning - PSC

- We have 59 20MHz channels in the 6GHz band and both active and passive scanning on all these channels is going to be very costly in terms of medium utilization, off channel time and battery life.
- So active scanning is only allowed on a select set of Preferred Scanning Channels (PSC)
- The complete list of all the 6 GHz PSC channels is 5, 21, 37, 53, 69, 85, 101, 117, 133, 149, 165, 181, 197, 213, 229

Passive Scanning - FILS

- Fast Initial Link Setup (FILS)
- Short Action frames sent every 20msecs
- STAs can use these action frames for in band passive scanning

```

IEEE 802.11 Wireless Management
  Fixed parameters
    Category code: Public Action (4)
    Public Action: FILS Discovery (0x22)
    > Frame Control: 0x1463, Capability, Short SSID, Primary Channel, Length
    Timestamp: 28602101758
    Beacon Interval: 0.102400 [Seconds]
    Short SSID: 0x738db4c7
    Length: 4
    > Capability: 0x106c
    Operating Class: 134
    Primary Channel: 65
  
```
