Quickly Inspect Your DOS Path

**Goal:** Find if a program or is in your %PATH%

Use this technique to inspect your DOS environment variables for specific strings using **findstr**.

1. Follow this example to see if perl is installed and your %PATH% environment variables is updated. First, open up a DOS window: `Windows + R cmd Enter`

2. Type in the DOS Window: `echo %PATH% | findstr /i perl Enter`

3. If perl is installed correctly, you should have it in your path.

4. You can also use this technique to find any environment variable. E.G., find if you have a temporary directory set:

   `set | findstr /i temp`
